

Providing Real Insights
into the Oil Market

PETRO-LOGISTICS

The Petro-Logistics Global Network

Petro-Logistics is the world's premier oil trade analytics company. We pioneered Tanker Tracking in the early-1980s. Over 40 years later, we continue to provide our clients with hard data on sea, pipe and rail flows, as well as a range of supply variables such as refinery intake and crude burn.

The accuracy that we achieve through leveraging hard data, combined with proprietary validation processes, positions us as the premier authority on seaborne petroleum trade flows and a leader in oil market analysis.

At Petro-Logistics, we make it our business to know exactly what cargo tankers are carrying, so we can provide our clients with measured insights. Our human approach to gathering and validating intelligence from around the world enables us to provide insights unmatched by big data analytics.

Our trade flow intelligence is used by the largest trading companies in the world. National oil companies rely on our insights to understand the production and exports of neighbouring countries and competing grades. Many of our clients have trusted us to provide them with quality data for the better part of four decades.

In this new age of information commoditisation, reliable data is critical to trading success in the oil market. Avoid risk and make the most of trading opportunities by leveraging Petro-Logistics' unique data and market insights.

Petro-Logistics was founded nearly 40 years ago by Conrad Gerber

Petro-Logistics monitors the world's major oil exporters to provide traders and analysts with accurate trade flow intelligence and granular supply and demand balances.

Reporting Services

Petro-Logistics produces over 60 reports each month delivered via email in various packages on weekly or monthly schedules. Additional data querying tools are available on our Client Area.

- **Macro Reports.** Pg 7
- **Former Soviet Union Exports.** Pg 9
- **Russia Domestic.** Pg 11
- **Crude Oil & Compensate.** Pg 14
- **Refined Products & Petroleum.** Pg 17
- **API Data Feeds.** Pg 21

In the age of information commoditisation, reliable data is critical to trading success in the oil market.

Macro Reports

Facilitating Better Trading Decisions

Obtaining accurate information on the global oil sector can be challenging. Traders and analysts often struggle to understand the disjointed viewpoints and inconsistent methodologies inherent in the oil market. Petro-Logistics' Macro Reports lift the veil of secrecy on the industry and provide clear and accurate trade flow intelligence.

Our reports help analysts and traders access the latest data and insights on oil flows, enabling them to make better trading decisions and optimise their positions to stay ahead of the competition. They provide unbiased insights into twenty-four of the world's major oil producing and exporting countries. Each weekly report provides timely and accurate information on more than half of the world's oil supply, covering supply balances, production agreements and supply disruptions.

Our data is gathered from reliable and well-versed sources and is validated by an experienced team of analysts, making our reports the most reliable source of oil supply information available to you.

OPEC Production Monitor

OPEC crude oil production accounts for more than 30% of global oil supply. In order to anticipate oil movements and pricing trends, it is crucial for traders and analysts to have the best possible understanding of supply and exports from the OPEC countries.

Petro-Logistics' OPEC Production Monitor has been a powerful source of market intelligence for over four decades. As our leading and most-read publication, it provides analyses of crude oil exports for each of the fourteen OPEC countries. It also offers a holistic supply balance with three full years of historical data available.

Our OPEC Production Monitor contains in-depth articles on topical themes, including OPEC production agreements and country-specific issues that result from supply disruptions. The OPEC Production Monitor is delivered as a PDF document by email every Thursday.

Non-OPEC Supply Monitor

Our Non-OPEC Supply Monitor provides monthly data for ten non-OPEC countries that are party to the Declaration of Cooperation, a joint agreement with OPEC to control their respective production level.

The report includes detailed supply information for the following ten countries: Russia, Kazakhstan, Azerbaijan, Oman, Bahrain, Brunei, Malaysia, Mexico, Sudan and South Sudan. It is delivered by email as a PDF and Excel file at the start of each and every month.

Additional Data Packages

Our Macro Reports are available with additional Data Packages that include add-ons to the base subscription. They include statistical Excel files and API data feeds that enable our clients to analyse data from their chosen interface in combination with other relevant information.

The API delivers data directly into our clients' spreadsheets and centralised databases, enhancing their analytical models. Daily updates ensure that the most current information is always at hand.

Our OPEC & Non-OPEC Monitor Reports, together with their associated Data Packages, are an essential element in understanding and anticipating oil market trends.

FSU Exports

Former Soviet Union Exports Package

As one of the largest exporting regions of crude oil and refined products, the Former Soviet Union is a key player in the global oil industry. Given the complexity of FSU oil policies and export routes, market participants need to have access to a trusted and thorough data source. Petro-Logistics has an unrivalled historical database on the region.

Petro-Logistics' weekly FSU Exports Package gives traders and analysts reliable information on crude oil and refined product exports from key areas in the Former Soviet Union. Our reports provide accurate data on exports by land and by sea, including the Baltic, the Arctic, the Black Sea and the Russian Far East. Our monthly reports reconcile export volumes by sea, rail and pipeline. They also summarise the origins and destinations of crude oil and refined products, offering the most comprehensive set of oil data for the region.

Swing production in FSU countries can have a major impact on the oil market, affecting trading opportunities and oil prices. Our loading schedule information for crude oil and gasoil enables our clients to foresee supplies from the region and to optimise their trading strategy on a regional and global level.

Weekly Up-to-Date Market Intelligence

Petro-Logistics provides the most timely, detailed and reliable statistics on trade flows and exports from the Former Soviet Union. Our clients appreciate the transparency of our human-led data on export grades and cargo destinations. Our regional weekly reports contain the following insights:

Baltic Sea

- Data on the origins of crude and refined product exports by load port and grade.
- Destinations of crude and refined product exports by destination country and region/continent.

Russian Far East

- Origins of refined product and crude oil exports by load port.
- Destinations of crude oil and refined product exports by discharge country and region/continent.

Black Sea

- Origins of crude oil and refined product exports by grade and load port.
- Destinations of Black Sea crude oil exports by grade and discharge country.
- Destinations of Black Sea refined product exports by discharge country.

FSU Exports by Sea

- Origins of FSU crude oil and refined product exports by load port.
- Destinations of FSU crude oil and refined product exports by discharge country.

Monthly Insightful Market Overviews

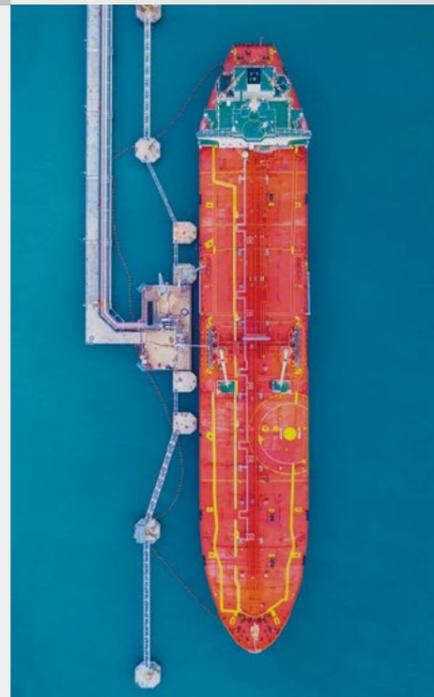

Our monthly reports provide our clients with real data from trusted sources within the Former Soviet Union. Our unique insights give traders and analysts the information they need to make informed trades. We offer the following monthly reports:

FSU Reconciliation Report

- Origins of crude oil and refined product exports in the Former Soviet Union by load port, origin country and mode of transportation (sea, pipe, rail).
- Destinations of FSU crude oil and refined product exports by discharge country and mode of transportation.
- Detailed data on pipeline and rail flows by cargo type, origin and destination country.
- Includes bi-monthly updates summarising the origins and destinations of crude oil and refined product exports by sea.

Forward Loading Schedules

- FSU gasoil loading schedules provide clear indications of future exports, most of which is absorbed by the North West Europe and the Mediterranean markets. The report summarises high and low sulphur grades by load port for the Baltic Sea, Black Sea and Russia Far East.
- Crude oil loading schedule for Transneft, covering the ports of Primorsk, Ust-Luga, Novorossiysk and Kozmino.

Russia Domestic

Russia Domestic Package

Petro-Logistics' Russia Domestic Package provides analysts and traders with unmatched insights into one of the most significant countries for oil production and export. Our report covers the entire supply chain, tracking every barrel that is produced, consumed and exported from the Russian territory. Our long history of tracking the country's oil activities provides us with the most detailed database on Russia in the industry.

Our clients benefit from having access to precise data on Russian crude oil and condensate production, refinery throughput and output, and exports by sea, pipeline and rail. With such depth of information, our clients are able to adopt an optimal trading strategy for their assets and investments.

All These detailed reports converge in our Russia Supply and Demand Balance, which provides an overview of Russia's domestic activities. It enables our clients to identify macro trends in the Russian market, anticipate oil price formation and trading opportunities.

Refinery Activity Report

- Deliveries of crude oil and condensate to the domestic and FSU refineries.
- Deliveries and throughput of crude oil and condensate, including an in-tank balance at each Russian refinery.
- Data on refined product output at each refinery.
- Refined product dispatchments detailing volumes for the domestic market and those earmarked for export.

Crude & Condensate Production Report

- Monthly production figures by oil producers since 2010.
- Monthly production figures by subsidiaries since 2015.
- Published on the first week of the following month.

Russia Crude Oil & Condensate Exports Report

This monthly report details the routes and transportation methods used to export Russian crude oil and condensate by sea, pipeline and rail. In order to provide a true figure for Russian exports, transit volumes from other FSU countries are discounted.

Russia Crude Oil & Condensate Balance Report

Petro-Logistics' exhaustive datasets provide unrivaled clarity on Russian crude oil and condensate trade flows. Using trusted sources, Petro-Logistics can provide an accurate supply and demand balance relying on complete crude oil production, export and demand data. The report includes:

- Timely information delivered every month in a detailed Excel file.
- All the important elements of the Russian supply and demand balance, including production, refining, exports and stocks.
- Data on monthly changes in tank stocks are separated into quantities within the Transneft pipeline network, as well as at the refineries.
- Historical data to enable the latest monthly information to be understood in context.

Our report covers the entire supply chain, tracking every barrel that is produced, consumed and exported from the Russian territory.

Crude Oil & Condensate

Crude Oil & Condensate Package

Market uncertainty leaves traders and analysts with a constant need for accurate information on changing flows in order to build their strategy and forecast prices. At Petro-Logistics, our range of crude oil and condensate reports provide an unmatched level of accurate and in-depth information on validated market trends. We offer detailed analyses of supply and exports for over 30 major producing countries.

We receive data on a daily, weekly and monthly basis from a vast network of trusted sources. The data is then processed and validated by our experienced team of analysts, before being aggregated and distributed to our clients.

Our Crude Oil & Condensate Package provides the latest export data by grade, port of origin, country of destination and other metrics. These detailed insights make our reports the most accurate source available for crude oil and condensate exports and supply.

Our range of crude oil and condensate reports clarify market trends, providing detailed analyses of supply and exports for over 30 major producing countries.

Prompt and Accurate Market Analyses

Petro-Logistics has been tracking oil flows since 1980, using a consistent methodology that produces reliable results. Through our wide array of sources, we are able to provide our clients with the very latest market insights in a timely manner. Our crude oil and condensate reports are delivered on a monthly basis in country-specific Excel files that provide the following:

- Export summary
- Supply summary
- Exports by grade/API
- Destinations by region/country
- Customer table

We also offer additional reports on a weekly basis that summarise exports by port of origin and country of destination. Petro-Logistics' API data feeds enable our clients to customise the information that they receive, so they remain informed of the latest trends in specific markets.

Crude & Condensate Coverage

Regional Reports

OPEC Origins & Destinations

OPEC encompasses some of world's key oil producers, whose supply policies have a crucial impact on the oil market and its prices. Petro-Logistics provides the most accurate information available on crude oil supply and cargo destinations for the OPEC countries.

Our report provides traders and analysts with data on exports from the thirteen current member states of OPEC: Algeria, Angola, Equatorial Guinea, Gabon, Iran, Iraq, Kuwait, Libya, Nigeria, Republic of Congo, Saudi Arabia, the UAE and Venezuela. The report is delivered weekly in an Excel file.

Summary tables include:

- Crude oil exports by load country
- Destinations of OPEC crude oil exports
- Export volumes and destinations for each OPEC country

West Africa Petroleum Trade Data

West Africa crude oil has long been a swing market. Understanding the flows out of the region is key to gaining accurate insights into the global oil market. Our report provides traders and analysts with data on exports from ten West African countries: Angola, Cameroon, Chad, Republic of Congo, Democratic Republic of Congo, Equatorial Guinea, Gabon, Ghana, Ivory Coast and Nigeria. The report is delivered monthly in an Excel file.

The Export Summary tables include:

- Crude oil and condensate combined exports by load country
- Crude oil exports by load country
- Condensate exports by load country

Additional data includes export destinations for:

- Crude oil and condensate combined
- Crude oil
- Condensate

The following data table is also included:

- Exports by cargo type, discharge country and customer

Refined Products & Petroleum Trade

Refined Products and Petroleum Package

Petro-Logistics' unrivalled insights into refined product trade flows enable investors and analysts to make more informed trading decisions. We publish a suite of reports covering a variety of countries, including Saudi Arabia, Iran, India and Pakistan. We also have reports that cover Russia and the Former Soviet Union.

We receive accurate and timely data from a vast network of trusted and well-informed sources, which we then validate, aggregate and distribute to our clients, providing them with a powerful source of market intelligence.

All of our refined product and petroleum trade reports are delivered as country-specific Excel files. They include three years of historical data to provide additional context and are illustrated in both tabular and graphical form. Our clients receive our reports on a weekly and/or monthly basis, with daily updates available via our API Data Feed.

Saudi Arabia Refined Product Exports

Saudi Arabia is one of the world's largest exporters of petroleum. With complex refineries focused on both the domestic and export markets, gathering accurate data on the country's exports is challenging. Petro-Logistics' reports provide insights from on-the-ground sources on refined product exports from major ports across the Kingdom.

Our coverage of Saudi Arabia includes the following cargo types: naphtha, motor gasoline, kerosene, gasoil, VGO, fuel oil and other products such as LPG and base/lube oil. These reports are delivered on a weekly and monthly basis in Excel.

The following summary tables are included:

- Exports by cargo type
- Exports by load port and cargo type
- Destination tables for each cargo type

The following data tables are included:

- Exports by cargo type, discharge country and lifter

Iran Fuel Oil Exports Analysis

Economic sanctions on Iran's exports have added a level of uncertainty to the country's oil trade. However, its fuel oil has continued to flow in spite of these restrictions. Our clients benefit from staying ahead of the very latest movements of the country's refined products and condensate trade. Our reports are delivered on a weekly and monthly basis.

The following summary tables are included in the report:

- Exports by grade
- Exports by destination

The following data tables are included:

- Exports by cargo grade, discharge country and lifter

India Petroleum Trade

India has one of the world's fastest-growing energy sectors and has experienced a steady increase in production and consumption of petroleum products in recent years. As a key import and export market for oil products, an increasing number of traders and analysts want to participate in India's oil industry. Having accurate and detailed data on such a relevant market will help build the right strategy and approach the market in the best possible way.

India Imports

At Petro-Logistics, we provide data on crude oil, condensate and refined product imports in a monthly report delivered as an Excel file.

The following summary tables are included in the report:

- Crude oil and condensate imports by refiner
- Refined product imports by cargo type
- Crude oil and condensate imports by load area

The following data tables are included:

- Imports by cargo grade and load country
- Imports by load area, cargo grade and customer

India Exports

We provide data on refined product exports of naphtha, motor gasoline, kerosene, gasoil, VGO, fuel oil and other products such as Carbon Black and Mixed Xylene. Updates are delivered on a weekly and monthly basis in an Excel file and PDF.

The following data tables are included:

- Exports by cargo type
- Exports by refiner, by cargo type
- Exports by lifter, broken down by cargo type
- Destination tables for each cargo type

Pakistan Petroleum Trade

Pakistan is known as a black box in the industry, with a scarcity of reliable information to understand import and export tendencies for oil products. Having a reliable and detailed source of data enables participants to have a hedge over their competition.

Pakistan Imports

Petro-Logistics provides data on crude oil and refined product imports in a monthly report delivered as an Excel file.

The following summary tables are included in the report:

- Crude oil imports by load area
- Refined product imports by cargo type

The following data tables are included:

- Imports by cargo type, cargo grade and load country

Pakistan Exports

We provide data on exports of condensate, naphtha, motor gasoline, kerosene, gasoil, fuel oil and other products. The Updates are delivered on a monthly basis in an Excel file

The following summary tables are included in the report:

- Exports by cargo type
- Destination tables for each cargo type

The following data tables are included:

- Exports by cargo type, discharge country and lifter

API Data Feeds

API Data Package

At Petro-Logistics, we receive real oil market data from a network of trusted sources. Our API enables clients to customise and automate the data that they receive from Petro-Logistics, so they remain informed of the latest trends in specific markets.

Our API streamlines the delivery of data, pulling it directly into our clients' spreadsheet or centralised database on a daily basis. The delivery of our API can be fully automated, limiting the need to carry out manual tasks to receive the latest data.

Users spend less time acquiring information and gain more time to analyse the latest trends and determine strategy. The data they receive can also be used in combination with other relevant insights, within their chosen interface.

Flexible Integration in Various Formats

Our API integrates seamlessly with a range of databases. Whatever the platform, whether it be Excel, a local database, a data aggregation platform, or an analytical front-end like Tableau or Power BI, our API can fully automate the process of data collection.

REST API clients can customise how they receive information. They can automate their consumption and integrate the API with their IT infrastructure using open-standard formats like JSON and XML. Non open-standard formats like CSV can also be integrated.

The Benefits of Using Our API

Petro-Logistics' data feeds and API provide our clients with unrivalled market intelligence on the oil industry. Our validated insights enable investors and analysts to make trading decisions with confidence.

In-Depth Granular Analysis

Our API delivers the underlying raw data that is summarised in our import/export reports, providing the flexibility to perform more in-depth and detailed analyses.

Automation and Efficiency

Less time is spent retrieving and collating data by integrating our API into an internal system.

Straightforward Integration

Data can be integrated into analytical models to improve fundamentals and trade flow analyses. Code examples are available for Excel, Python, Java, R-programming, PHP and .NET.

Ongoing Support

Beyond having the most accurate data available on oil markets, we pride ourselves in providing quality support to our clients. Our Support Group has always assisted clients in creating custom models, analysing trade flows, conducting competitor analyses and supply-chain management.

We receive real oil market data from a network of trusted sources.
